PREFACE

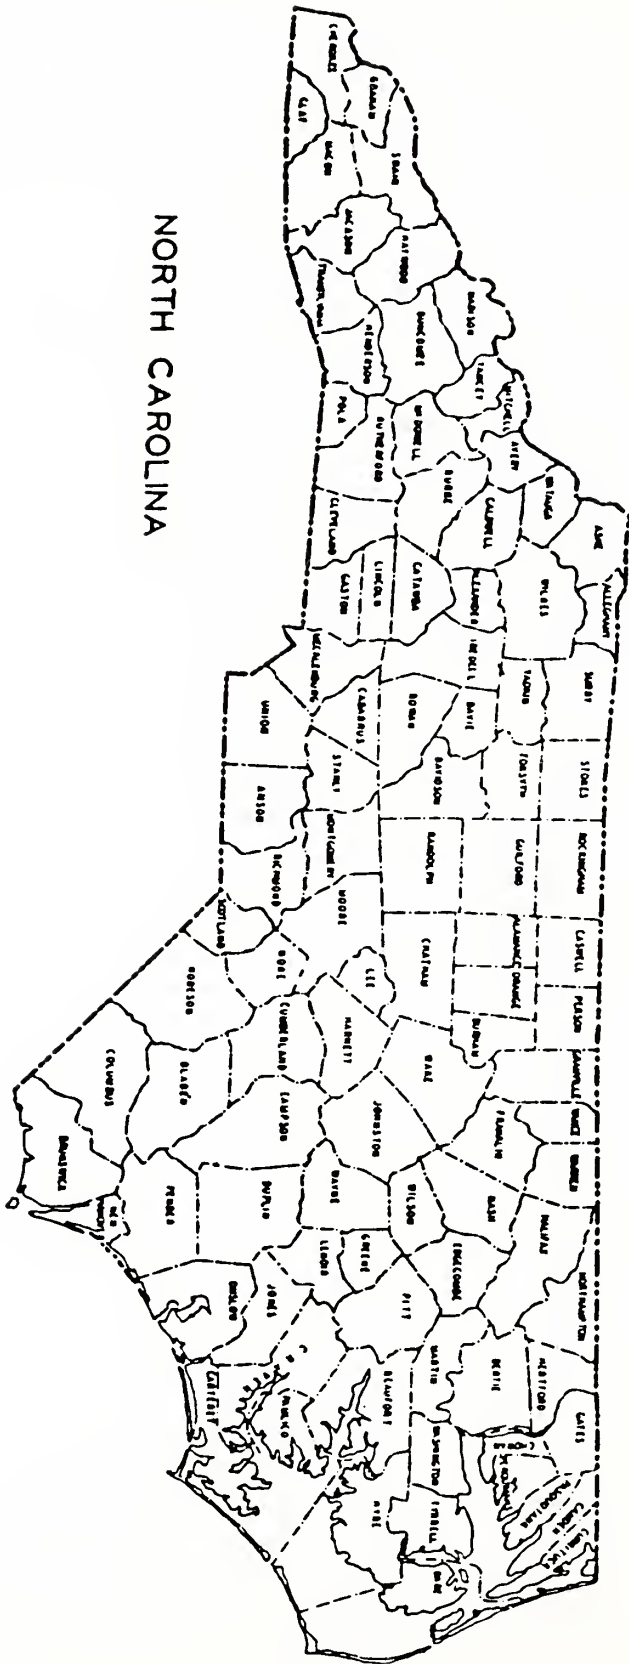

In the course of publishing various statistical documents, it became obvious that there was a missing element, that is, a document that would depict the health and population of North Carolinians at a glance. The graphs, maps and charts contained in this publication should be relatively simple to understand and should give the user a "snapshot" of North Carolina's people.

The data used to generate the graphics came from many sources, but most are resident within the State Center for Health Statistics. Other data sources include the N.C. Office of Budget and Management, Centers for Disease Control, the National Center for Health Statistics, Bureau of the Census, and the Health Services Research Center at the University of North Carolina. Many of the graphics themselves have been used in other publications, and therefore, label and title styles vary.

Special thanks are due Gerri Roberts, Brenda Harris, and Kathryn Surles for their assistance with proofreading, typing, and choice of graphics. Frank Mathews is also due a major part of the credit for help with creating the graphs and charts.

We welcome your comments on the usefulness, clarity and choice of data on which these graphics are based.

NORTH CAROLINA

DEFINITIONS

Abortion Rate:

$$\frac{\text{Number of reported resident induced abortions}}{\text{Female population of childbearing ages (15-44)}} \times 1,000$$

Age-Race-Sex Adjusted Death Rate: These rates are what would be expected if the average annual age, race and sex composition of each county's population was the same as that estimated for the state. These rates are free of differing effects of age, race, and sex and thus permit the user knowledge of the area's status with other determinants of mortality.

AIDS: The acronym for acquired immune deficiency syndrome.

Arithmetic Scale: Equal distances on the arithmetic scale represent equal numeric changes. Most graphs in this book are on the arithmetic scale.

Birth Rate:

$$\frac{\text{Number of resident live births}}{\text{Total resident population}} \times 1,000$$

Case Rate:

$$\frac{\text{Number of resident cases of disease}}{\text{Total resident population}} \times 100,000$$

Cause-Specific Death Rate:

$$\frac{\text{Number of resident deaths from specified cause}}{\text{Total resident population}} \times 100,000$$

Community Hospital: A short stay (average less than 30 days) general hospital providing primarily acute medical care.

Crude Birth Rate:

$$\frac{\text{Number of resident live births}}{\text{Total resident population}} \times 1,000$$

Death Rate:

$$\frac{\text{Number of resident deaths}}{\text{Total resident population}} \times 1,000$$

Divorce Rate:

$$\frac{\text{Number of occurrence divorces}}{\text{Total resident population}} \times 1,000$$

Fetal Death: Death prior to delivery, of 20 weeks or greater duration of pregnancy, in which the fetus does not breathe or show any indication of life. This does not include therapeutic abortions.

Fetal Death Rate:

$$\frac{\text{Number of resident fetal deaths}}{\text{Number of resident live births plus fetal deaths}} \times 1,000$$

Fertility Rate:

$$\frac{\text{Number of resident live births}}{\text{Female population of childbearing ages (15-44)}} \times 1,000$$

Full-Time-Equivalent Employee: The number of hours, whether full-time or part-time that equal a full-time employee. Example: A full-time worker works 1,000 hours a year; therefore an employee who works 500 hours per year is one-half (0.5) of a full-time-equivalent.

Inadequate Prenatal Care: One of the following sets of circumstances determines that prenatal care is inadequate:

- 1.) Prenatal care that is begun during the third trimester
- 2.) No care is received
- 3.) 14-21 weeks gestation and 0 prenatal visits
- 4.) 22-29 weeks gestation and 1 or less prenatal visits
- 5.) 30-31 weeks gestation and 2 or less prenatal visits
- 6.) 32-33 weeks gestation and 3 or less prenatal visits
- 7.) 34 or more weeks gestation and 4 or less prenatal visits

Infant Death Rate:

$$\frac{\text{Number of resident deaths under 1 year of age}}{\text{Number of resident live births}} \times 1,000$$

Logarithmic Scale: Equal distances on the logarithmic scale represent equal percentage changes, whereas equal distances on the arithmetic scale represent equal numeric changes. Figures 20, 30 and 31 are drawn by the logarithmic scale.

Low Birthweight: 2500 grams (5 pounds, 8 ounces) or less at birth, regardless of the length of gestation.

Marriage Rate:

$$\frac{\text{Number of occurrence marriages}}{\text{Total resident population}} \times 1,000$$

Median Age: The age at which exactly half of the population is older than the median and exactly half is the same age or younger.

Medicaid: A public medical assistance program to the aged, blind, and disabled individuals and to families with dependent children whose income and resources are insufficient to meet their medical needs. Medicaid is authorized under Title 19 of the Social Security Act with funding from state, federal and local governments.

Blood Alcohol Level 100 mg%: According to North Carolina law, a person is legally intoxicated if their blood level contains .10 percent alcohol or 100 mg.

Morbidity Rate:

$$\frac{\text{Number of resident cases of a specific disease}}{\text{Total resident population}} \times 100,000$$

Neonatal Death: Death of a liveborn child under 28 days of age.

Neonatal Death Rate:

$$\frac{\text{Number of resident deaths under 28 days of age}}{\text{Number of resident live births}} \times 1,000$$

Occupancy Rate: The percentage of the bed capacity (of a hospital or nursing home) which is occupied on the average.

$$\frac{\text{Total annual days of care}}{\text{Beds in use} \times 365} \times 100$$

Per Capita: Per person.

Postneonatal Death: Death of a liveborn child 28 days and over but less than one year of age.

Postneonatal Death Rate:

$$\frac{\text{Number of resident postneonatal deaths}}{\text{Resident live births minus neonatal deaths}} \times 1,000$$

Poverty: A national index based on money income (excluding noncash benefits), family size, age of householder and number of children under 18.

Pregnancies: The total number of resident live births plus resident fetal deaths plus resident abortions. This number does not include fetal deaths of less than 20 weeks gestation.

Pregnancy Rate:

$$\frac{\text{Number of resident pregnancies}}{\text{Female population of childbearing ages (15-44)}} \times 1,000$$

Primary Care Physician: A federal or nonfederal practitioner who:

- 1) is licensed or registered with the Board of Medical Examiners,
- 2) holds the Doctor of Medicine or Doctor of Osteopathy degree, and
- 3) practices in one of the following categories: family practice, general practice, internal medicine, obstetrics/gynecology or pediatrics.

Trimester: A time span of three months.

WIC: Women, Infants and Children Program participants. A program which supplements the diets of pregnant women and young children.
